

Questions we recommend you ask when trying to find a website designer/developer to work with:

1. What kind of tools will I need to maintain the site after it is built?
2. Are you willing to train me to edit my site afterwards, if I so choose?
3. If you are unavailable, will I be able to find someone who can help me with any changes to my site in the future, i.e., do you use standard tools and software?
4. Will my site require any sort of special hosting package because of the software used?
5. What kind of support can I expect after the site is built?
6. Will you give me choices for reducing costs where possible when building the site?
7. Will I own all the content, domain names and software after you are done building the site, or is there something proprietary you will continue to own?
